

- 1) What properties of carbon make it suitable for forming organic molecules?
- 2) Match the functional groups with their names.

- |              |                               |
|--------------|-------------------------------|
| a. Phosphate | <del>1. -CH<sub>3</sub></del> |
| b. Methyl    | <del>2. -PO<sub>4</sub></del> |
| c. Amine     | <del>3. -COOH</del>           |
| d. Carboxyl  | <del>4. -NH<sub>2</sub></del> |
| e. Hydroxyl  | <del>5. -CHO</del>            |
| f. Carbonyl  | <del>6. -OH</del>             |

- 3) Label each of the functional groups with the correct name

phosphate    carboxyl    methyl    amine    hydroxyl    carbonyl

- 4) List the 4 macromolecules and the monomers of each. protein = amino acid    carbohydrate = mono saccharide
- 5) List the function of each type of macromolecule. nucleic acid = nucleotide    lipid =  $\emptyset$
- 6) Draw the structure of an amino acid.
- 7) What makes the amino acid glycine different than alanine? The "R" groups are different
- 8) Draw and explain the primary, secondary, tertiary, and quaternary structure of proteins.
- 9) Write the correct letter next to each

- |                            |                 |                                   |                 |
|----------------------------|-----------------|-----------------------------------|-----------------|
| a. Protein                 | b. Carbohydrate | c. Lipid                          | d. Nucleic acid |
| i. Monosaccharide <b>B</b> |                 | viii. RNA <b>D</b>                |                 |
| ii. Amino acid <b>A</b>    |                 | ix. cholesterol <b>C</b>          |                 |
| iii. DNA <b>D</b>          |                 | x. glucose <b>B</b>               |                 |
| iv. Steroid <b>C</b>       |                 | xi. saturated fatty acid <b>C</b> |                 |
| v. Triglyceride <b>C</b>   |                 | xii. Phospholipid <b>C</b>        |                 |
| vi. Cellulose <b>B</b>     |                 | xiii. glycogen <b>B</b>           |                 |
| vii. Starch <b>B</b>       |                 | xiv. Polysaccharide <b>B</b>      |                 |

- 10) What is the difference between dehydration synthesis and hydrolysis?

- 11) Label the following as monosaccharides, disaccharides, or polysaccharides

- a. Glucose **M**    b. starch **P**    c. glycogen **P**    d.

- 12) What type of macromolecules are the following? Label as saturated, monounsaturated, or polyunsaturated.

- 13) What are the three parts of a nucleotide? Label the figure with these parts.

- 14) From the lab -

	Molecule tested for:	Positive result	Negative result
Biuret	protein	purple	blue
Benedicts	simple sugar	orange	blue
Paper Bag	lipid	translucent	-
Iodine	starch	black	yellow

#5 Look at the PPT - here are a few

\* protein = enzymes, cell membrane, transport structure

\* carbohydrates = energy

→ Starch = energy storage in plants

\* Cellulose = structure in plants

\* glycogen = energy storage in animals

\* lipids - stores energy - triglyceride

- Steroids - testosterone, cholesterol hormones

- cell membrane (phospholipids)

- coatings (wax) protection

\* nucleic acids

- genetic information = DNA, RNA

- usable energy = ATP

6.

8. 1° gly-ala-met-ala

the sequence of amino acids

2° =   $\alpha$  helix +  $\beta$  sheets

3° =  - 3-D structure

4° =  > 1 protein chain

10. dehydration synthesis

hydrolysis
